

*Whether it's about a flexible company network or the operation of critical infrastructure, security and availability are decisive.*

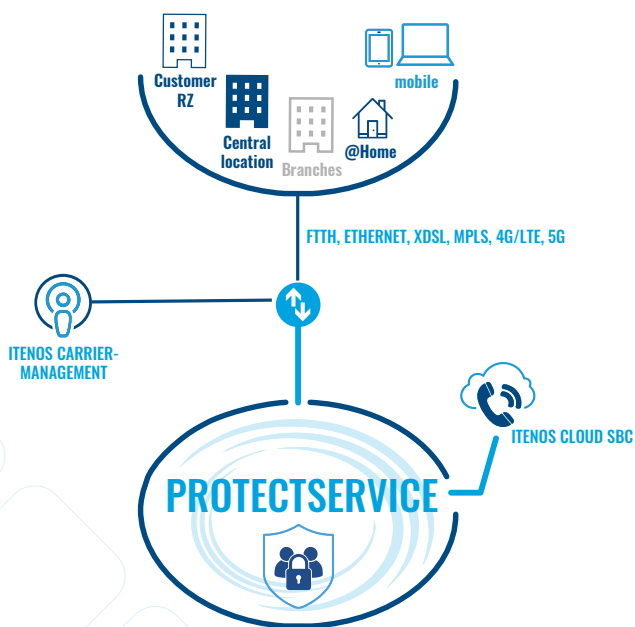

## ProtectService: autonomous IP platform for your enterprise

Speed and agility are more important than ever for enterprises. Along with optimal data and voice connections, a private network in your company provides the best possible support for all processes. ProtectService connects all decentralized locations securely to the central location.

### Fully secure and professionally networked

Secure and reliable site networking is an essential success factor for companies with a distributed location structure. This means that all decentralized locations, such as branches, cash machines, alarm systems, filling stations or wind farms, and the central location (e.g., control center or data center) are reliably interconnected. To meet this specific requirement, ITENOS offers custom WAN solutions as part of a modular concept for all sectors, including the public sector – e.g., schools, state authorities, lottery companies and social institutions. ITENOS provides comprehensive support, from planning and network design to the configuration, rollout and commissioning of the branch network to the operation and management of all components.

All ITENOS platforms and data centers are of course certified and operated according to ISO 27001. Additionally, ProtectService provides maximum flexibility in terms of potential network access points for branches, home offices, etc. via xDSL, FTTH, MPLS, 4G/LTE, 5G, as well as dedicated connections for the central location. As part of ITENOS Carrier Management, we offer a multi-provider strategy.

## Our strengths

### Autonomous and secure

High security, high availability and autonomous location networking based on MPLS

### ITENOS WiFi

Secure, reliable and future-proof WiFi solutions tailored to your needs

### Internet breakout

Optional central and secure internet breakout for the WAN network

### ITENOS SD WAN integration

Optimal combination of ProtectService with an SD WAN overlay

### ITENOS Carrier Management

Availability of advanced carrier and access technologies (xDSL, FTTx, 4G/LTE, 5G); multi-provider strategy

### Voice communications

With SIP-based voice integration and ITENOS's own cloud SBC

## Your ITENOS benefits

We are the first choice for SMEs when it comes to custom ICT solutions from a single source:

- Ready-made and tailored network concepts
- Agile implementation of customer requirements
- Stringent security standards
- An ITENOS customer team for all services and processes, with 360° support
- Own service desk in Germany

### ITENOS certificates

**ZERO OUTAGE**  
CERTIFIED PARTNER
