

*„ITENOS is the perfect colocation service partner for the SME segment.“
ISG, 2022*

Connect four – ITENOS again rated as a Top 5 colocation provider

ISG STUDY

ISG analyzed 20 colocation service providers to mid-market and large enterprise clients for the Provider Lens™ “Next-Gen Private/Hybrid Cloud – Data Center Solutions & Services 2022” award. ITENOS received a position in the “Leader” quadrant for the fourth year in a row after the analyst firm was once again impressed with the services offered by our company. Being recognized among the top 5 in the market indicates once again that we are one of the leading colocation providers and reaffirms the continued high quality of our services.

With a total of seven data centers and 31,200 m² of net floor space, ITENOS “is used by more than 200 companies in the SME segment, but also large enterprise clients and service and cloud providers”, making it “the perfect colocation service partner for the SME segment” according to ISG experts. As part of their assessment, the analysts praised ITENOS’ comprehensive range of connectivity solutions, which allows “a wide variety of technology and services to be connected via a single port”—all thanks to the DataLogistIX platform.

What distinguishes us in colocation services according to ISG

Attractive range of services

“The services are tailored to customer needs and the company provides professional support in relocation planning, implementation, and commissioning of the infrastructure in a data center. ITENOS offers a full range of services, including remote hands, which makes it much easier for customers to manage their infrastructure.”

Secure data centers

“The company’s highly available data centers boast fully redundant architecture to minimize downtime. ISO 9001 (quality management), ISO 27001 (information security management), ISO 27017 (security controls for cloud services) and ISO 27018 (protection of personal data in the cloud) certifications guarantee compliance.”

Comprehensive connectivity

“The DataLogistIX platform offers customers a wealth of solutions, allowing a wide variety of technology and services to be connected via a single port. It provides access to 150 carriers, the internet node DE-CIX and secure connections to all the big hyperscalers.”

Gabriel Willigens
Head of Business Unit Data LogistIX

„We are very proud that we have been ranked among the TOP 5 colocation providers in the market for the fourth time in a row. Our continued success proves that our services precisely meet the needs of medium-sized businesses – including the excellent connectivity via the DataLogistIX platform. To remain successful in the future, we are already working on new connectivity concepts for tomorrow.“
